

Document as you go

Calibration is an important part of any instrumentation maintenance program, but planning and executing the calibration program using manual tools and pen and paper is an error-prone, time consuming and expensive exercise. With the help of a computerized calibration management system and documenting process calibrators communicating with each others, you can achieve better results and remarkable savings.

The Beamex[®] MC4 is a documenting process calibrator. Instrument data can be sent from a computer to the MC4, and calibration results can be uploaded from the MC4 to a computer using the Beamex[®] CMX calibration software.

Being a multifunctional calibrator, MC4 is suitable for calibrating various process parameters, such as pressure, temperature and electrical signals.

High accuracy is one of the important features of the MC4. A standard feature of the MC4 includes an accredited calibration certificate as proof of its accuracy. The correction coefficients of a PRT probe can be programmed into MC4 to further improve the temperature accuracy.

The large graphical display, menu-based multilingual user interface, and full numerical keyboard make it easy to learn and use the MC4. A rechargeable internal battery pack and charger are standard accessories that support the effective use of the MC4. The membrane keyboard and integrated impact protectors make the MC4 a weatherproof and robust calibrator. The MC4 can have both internal and external pressure modules, making it extremely versatile.

With the MC4, it is easy and fast to make automated and documented calibrations of process instruments.

The high quality and functionality, combined with an affordable price, makes MC4 a great calibration tool.

Beamex[®] MC4 Documenting Process Calibrator

Beamex[®] MC4 Documenting Process Calibrator and Beamex[®] CMX Calibration Management Software make an efficient paperless computerized calibration system.

MC4 Measurement and Generation/Simulation Functionality

	Features Internal pressure module (optional)	
l	Connection for external pressure modules	
	Current measurement (with internal and external supply)	
	Voltage measurement	
	Frequency measurement	
	Pulse counting	
l	Switch sensing	
	Internal HART [®] compatible 24 VDC loop supply	
	Current generation (with internal and external supply)	0
	Voltage generation	a a
	Frequency generation	
	Pulse generation	
	mV measurement / simulation	/ 🗐 🌀
	Resistance measurement / simulation	
	RTD measurement / simulation, supports Callendar van Dusen sensor coefficients for PRT sensors	
	Thermocouple measurement / simulation	A Marca and a service

Features of the MC4 Calibrator

1. Versatile Calibration Mode

The MC4 includes a versatile Calibration Mode, making it easy and effective to calibrate process instruments.

2. All-in-one functionality

The MC4 is a versatile calibrator with many different functions. There's no need to take several different measurement devices to the field, MC4 does the job.

3. Accuracy guaranteed

The MC4 is a highly accurate process calibrator. As a proof of this, each calibrator is delivered with a traceable, accredited calibration certificate.

4. Calibration is fast and easy The large graphical display, menu-based multilingual user interface, and full numerical keyboard make the MC4 quick and easy to use.

Advanced features of MC4

FeatureSpecificationCalibration ModeMC4 includes a versatile Calibration Mode making it easy and effective to create and calibrate process instruments.PRT sensor coefficientsPossibility to enter PRT sensor's correction coefficients into the MC4 enabling it to compensate sensor errors.Error % displayWhen calibrating a transmitter, the transmitter's output may be displayed in an error % unit rather than in an engineering unit.Error display in input or output unitsWhen calibrating a transmitter, the transmitter's output may be displayed as error in input or output engineering unit.%-displayAny measurement or generation may be presented as a percent within the user-programmable range.%-displayA versatile, programmable scaling function allows the user to scale any measured or generated unit into any custom unit. Scaling also includes a rooting transfer function for flow applications, as well as custom transfer functions.User setupsThe unit has a large number of user-configurable setups that make it easy to save and quickly recall the desired configuration.Step and RampThe leak test function indicates the pressure drop and leak rate during the user-programmable period.ProgrammableAny measurement can be programmable automatic step and ramp generation function, as well as manual atep function.ProgrammableAny measurement allows the user to display the measurement value or on its alarmsalarmsThe bar graph allows the user to display the measurement or generation as an analogue bar, including programmable starting and ending points.DampingProgrammable damping allows the user to measure the difference between two pressure modules.DerivationThe bar graph a

General Specifications

Feature	Specification
Display	60 mm x 60 mm (2.36" x 2.36"), 160 x 160 pixels, back lit LCD
Weight	720830 g (1.591.83 lbs)
Dimensions	215 mm (8.5") x 102 mm (4") x 49 mm (1.9") (d/w/h)
Keyboard	Membrane keyboard
Battery type	Rechargeable NiMH pack, 4000 mAh, 3.6V DC
Charging time	5 hours
Charger supply	100240 VAC, 50–60 Hz
Battery operation	1324 hours in measurement mode, back light off. 812 hours when sourcing an average of 12 mA to loop, with back light on.
Battery operation with optional dry battery cartridge and 4 alkaline AA cells	48 hours in measurement mode, back light off. 34 hours when sourcing an average of 12 mA to loop, with back light on.
Operating temperature	–1050°C (14122°F)
Operating temp. while charging batteries	035°C (3295°F)
Storage temperature	–2060°C (–4140°F)
Humidity	0 to 80% R.H. non-condensing
Warm-up time	Specifications valid after a 5-minute warm-up period.
Max. input voltage	30 V AC, 60 V DC
Safety	Directive 73/23/EEC, EN 61010-1
EMC	Directive 89/336/EEC, EN 61326

Voltage measurement -1...60 V DC

Range	Resolution	1 Year Uncertainty(±) ¹⁾
±0.25 V	0.001mV	0.02% RDG + 5 μV

Maximum Resistance excitation current	5 mA (0650 Ω)	lexc × Rsim < 3.25 V (6504000 Ω)
Settling time (pulsed currents)	1 ms	
Supported units	Ω, kΩ	

Specification valid with an exitation current >0.2 mA (0...400 ohm), >0.1 mA (400...4000 ohm)

Frequency generation 0.0005...10 000 Hz

Range	Resolution	1 Year Uncertainty(±) 1)	
0.00050.5 Hz	0.000001 Hz	0.01% RDG	
0.55 Hz	0.00001 Hz	0.01% RDG	
550 Hz	0.0001 Hz	0.01% RDG	
50500 Hz	0.001 Hz	0.01% RDG	
5005000 Hz	0.01 Hz	0.01% RDG	
500010000 Hz	0.1 Hz	0.01% RDG	

Feature	Specification
Temperature coefficient	Specification valid from -10 to 50°C (14122°F)
Maximum load current	5 mA
Output amplitude positive square wave	012 Vpp ±(0.2 V+5%)
Output amplitude symmetric square wave	06 Vpp ±(0.2 V+5%)
Duty cycle	199% (0.0009500 Hz), high / low time: min 25µs, max 1165 s
Supported units	Hz, kHz, cph, cpm, 1/Hz (s), 1/kHz (ms), 1/MHz (μs)
Jitter	< 0.28 µs

Pulse generation 0...9 999 999 pulses

Feature	Specification
Range	0 to 9 999 999 pulses
Resolution	1 pulse
Maximum load current	5 mA
Output amplitude positive pulse	012 Vpp ±(0.2 V+5%)
Output amplitude symmetric pulse	06 Vpp ±(0.2 V+5%)
Pulse frequency	0.000510 000 Hz
Duty cycle	199% (0.0009500 Hz), high / low time: min 25µs, max 1165 s

1) Uncertainty includes reference standard uncertainty, hysteresis, non-linearity, repeatability and typical long-term stability for the mentioned period. (k=2).

Thermocouple measurement and simulation

Feature	Measurement	Simulation
Resolution	0.01°C	0.01°C
Temperature coefficient	< ±0.0015% of thermovoltage / °C outside of 1828°C < ±0.0008% of thermovoltage / °F outside of 64.482.4°F	< ±0.0015% of thermovoltage / °C outside of 1828°C < ±0.0008% of thermovoltage / °F outside of 64.482.4°F
Input impedance	>10 MΩ	-
Supported units	°C, °F, K	°C, °F, K
Display update rate	3 / second	-
Maximum load current	-	5 mA
Load effect	-	< 5 µV/mA

Internal Reference Junction

ł	Range (°C)	1 Year Uncertainty		
	–1050°C	±0.25°C		

 Uncertainty includes reference standard uncertainty, hysteresis, non-linearity, repeatability and typical long-term stability for the mentioned period. (k=2). Uncertainty does not include reference junction uncertainty.

2) IEC 584, NIST MN 175, BS 4937, ANSI MC96.1

3) $\pm 0.02\%$ of thermovoltage + 4 μ V

4) DIN 43710

5) ASTM E 988 - 96

6) ASTM E 1751 - 95e1

RTD measurement and simulation

Sensor Type	Range	Resolution	Measurement 1 Year Uncertainty (±) ¹⁾	Simulation 1 Year Uncertainty (±)

Feature	Measurement	Simulation
Temperature coefficient	< ±0.0015% of resistance / °C outside of 1828°C < ±0.0008% of resistance / °F outside of 64.482.4°F	< ±0.0015% of resistance / °C outside of 1828°C < ±0.0008% of resistance / °F outside of 64.482.4°F
Measurement current	Pulsed, 1 mA (0500 Ω), 0.2 mA (>500 Ω).	-
Maximum Resistance excitation current	-	5 mA (0…650 Ω) lexc × Rsim < 3.25 V (650…4000 Ω)
Supported units	°C, °F, K	°C, °F, K
Display update rate	3 / second	-
Settling time (pulsed currents)	1 ms	-

RTD types available as standard							
Pt50 (385)	Pt400 (385)	Pt100 (3926)	Pt100 (3923)	Cu10 (427)			
Pt100 (385)	Pt500 (385)	Pt100 (391)	Ni100 (618)				
Pt200 (385)	Pt1000 (385)	Pt100 (375)	Ni120 (672)				

Uncertainty includes reference standard uncertainty, hysteresis, non-linearity, repeatability and typical long-term stability for the mentioned period. (k=2).
 Specification valid with an excitation current >0.2 mA (0...400 Ω), >0.1 mA (400...4000 Ω)

MC4 supports Callendar van Dusen correction coefficients for PRT sensors to compensate sensor error.

Standard Accessories

- User guide
- Calibration certificate
- Internal rechargeable NiMH battery pack + battery charger
- Test leads and clips
- USB cable
- Adapter pressure connector from G1/8" female to G 1/8" male with 60° internal cone (included in models with internal pressure module)

Optional Accessories

- Pressure T-hose
- · Soft carrying case
- Connection cable for external pressure modules
- Dry battery cartridge
- Calibration handpumps
